

The process of lamp casing was patented by the Company VERBOOM and exploited by the mark ERIES® since 2003. This technique allows meeting the requirements of food quality production lines. This protective sleeve avoids any dispersal of glass fragments in case of incident.

The sleeve thermo-retracted, is transparent material for UV and it is FEP (Dupont de Nemours).

Certificate: *in case of accidental breaking of the lamp, the sleeve thermo-retracted assures a physical protection against any dispersal of quartz. The sleeve is tear-proof and can support a non-cutting shock without deterioration - the quartz of the lamp, even broken, cannot cause any damage or loss of sleeve's integrity.*

Note: *ELTECH Equipments could not be held responsible for a misuse of the sleeved lamps. This certificate involves only the equipments of our manufacturing integrated by the builders of aseptic machines, customers of ELTECH Equipments.*
